

Permanent Traffic Recorders

Pennsylvania maintains permanent traffic recorders at 92 strategically selected locations throughout the state. These permanent sites collect traffic volume data on a continuous basis throughout the year. This data is used to develop daily and seasonal factors, as well as to identify changes in traffic patterns. Based on a research study performed by Pennsylvania State University and West Virginia University, it was determined that PennDOT locations in the traffic pattern groups were acceptable according to the FHWA Traffic Monitoring Guide.

ATR 15 in Fulton County

The permanent sites use magnetic loops embedded in the pavement for vehicle detection. The data is stored on-site in traffic counters, prior to being automatically polled every night through the use of modems located at each permanent site.
